## Project Design Phase-II Solution Requirements (Functional & Non-functional)

| Date          | 13 October 2022                           |
|---------------|---|
| Team ID       | PNT2022TMID20598                          |
| Project Name  | Skill / Job Recommender-Cloud Application |
|               | Development                               |
| Maximum Marks | 4 Marks                                   |

## **Functional Requirements:**

Following are the functional requirements of the proposed solution.

| FR No. | Functional Requirement (Epic) | Sub Requirement (Story / Sub-Task)  |
|--------|-------------------------------|---|
| FR-1   | User Registration             | <ol> <li>Registration through Form</li> <li>Registration through Gmail</li> </ol>   |
|        |                               | 3. Registration through LinkedIN  |
| FR-2   | User Confirmation             | <ol> <li>Confirmation via Email</li> <li>Confirmation via OTP</li> </ol>  |
| FR-3   | Job profile display           | Display job profiles based on availability, location, skills  |
| FR-4   | Chatbot                       | A chat on the webpage to solve user queries and issue   |
| FR-5   | Job registration              | Copy of the company the user applied for with its registration/description details will be sent to the registered email id. |
| FR-6   | Logout                        |   |

## **Non-functional Requirements:**

Following are the non-functional requirements of the proposed solution.

| FR No. | Non-Functional Requirement | Description                               |
|--------|----------------------------|---|
| NFR-1  | _                          | 1. The webpage will be designed in such   |
|        |                            | a way that any non-technical user can     |
|        | Usability                  | easily navigate through it and            |
|        |                            | complete the job registration work.       |
|        |                            | (Easy and Simple design.)                 |
|        |                            | 2. Reduce information overload by         |
|        |                            | generating personalized job               |
|        |                            | suggestions.                              |
| NFR-2  |                            | 1. Using of SSL certificate (Python Flask |
|        | Security                   | to Cloud connect) will provide security   |
|        |                            | to the project.                           |
|        |                            | 2. Database will be safely stored in DB2. |
| NFR-3  | Reliability                | To make sure the webpage doesn't go       |
|        |                            | down due to network traffic.              |
| NFR-4  |                            | 1. Focus on loading the webpage as        |
|        |                            | quickly as possible irrespective of the   |
|        | Performance                | number of user/integrator traffic.        |
|        |                            | 2. Carry out an evaluation to quantify    |
|        |                            | empirically the recommendation            |
|        |                            | abilities of two state-of-the-art         |
|        |                            | methods, considering different            |
|        |                            | configurations, within the proposed       |
|        |                            | framework                                 |
| NFR-5  |                            | 1. The scraper is set up to avoid         |
|        |                            | duplicate job offers, thus all the job    |
|        | Availability               | offers are unique.                        |
|        |                            | 2. To making the user reliable. This      |
|        |                            | webpage will be available to all users    |
|        |                            | (network connectivity is necessary) at    |
|        |                            | any given point of time.                  |
|        |                            | 3. Made publicly available a new dataset  |
|        |                            | formed by a set of job seekers profiles   |
|        |                            | and a set of job vacancies collected      |
|        |                            | from different job search engine sites.   |
| NFR-6  |                            | 1. Increasing the storage space of        |
|        | Scalability                | database can increase the number of       |
|        |                            | users.                                    |
|        |                            | 2. Add some features in future to make    |
|        |                            | the webpage unique and attractive         |
